

EVERYTHING ABOUT GOOD AUTHORS

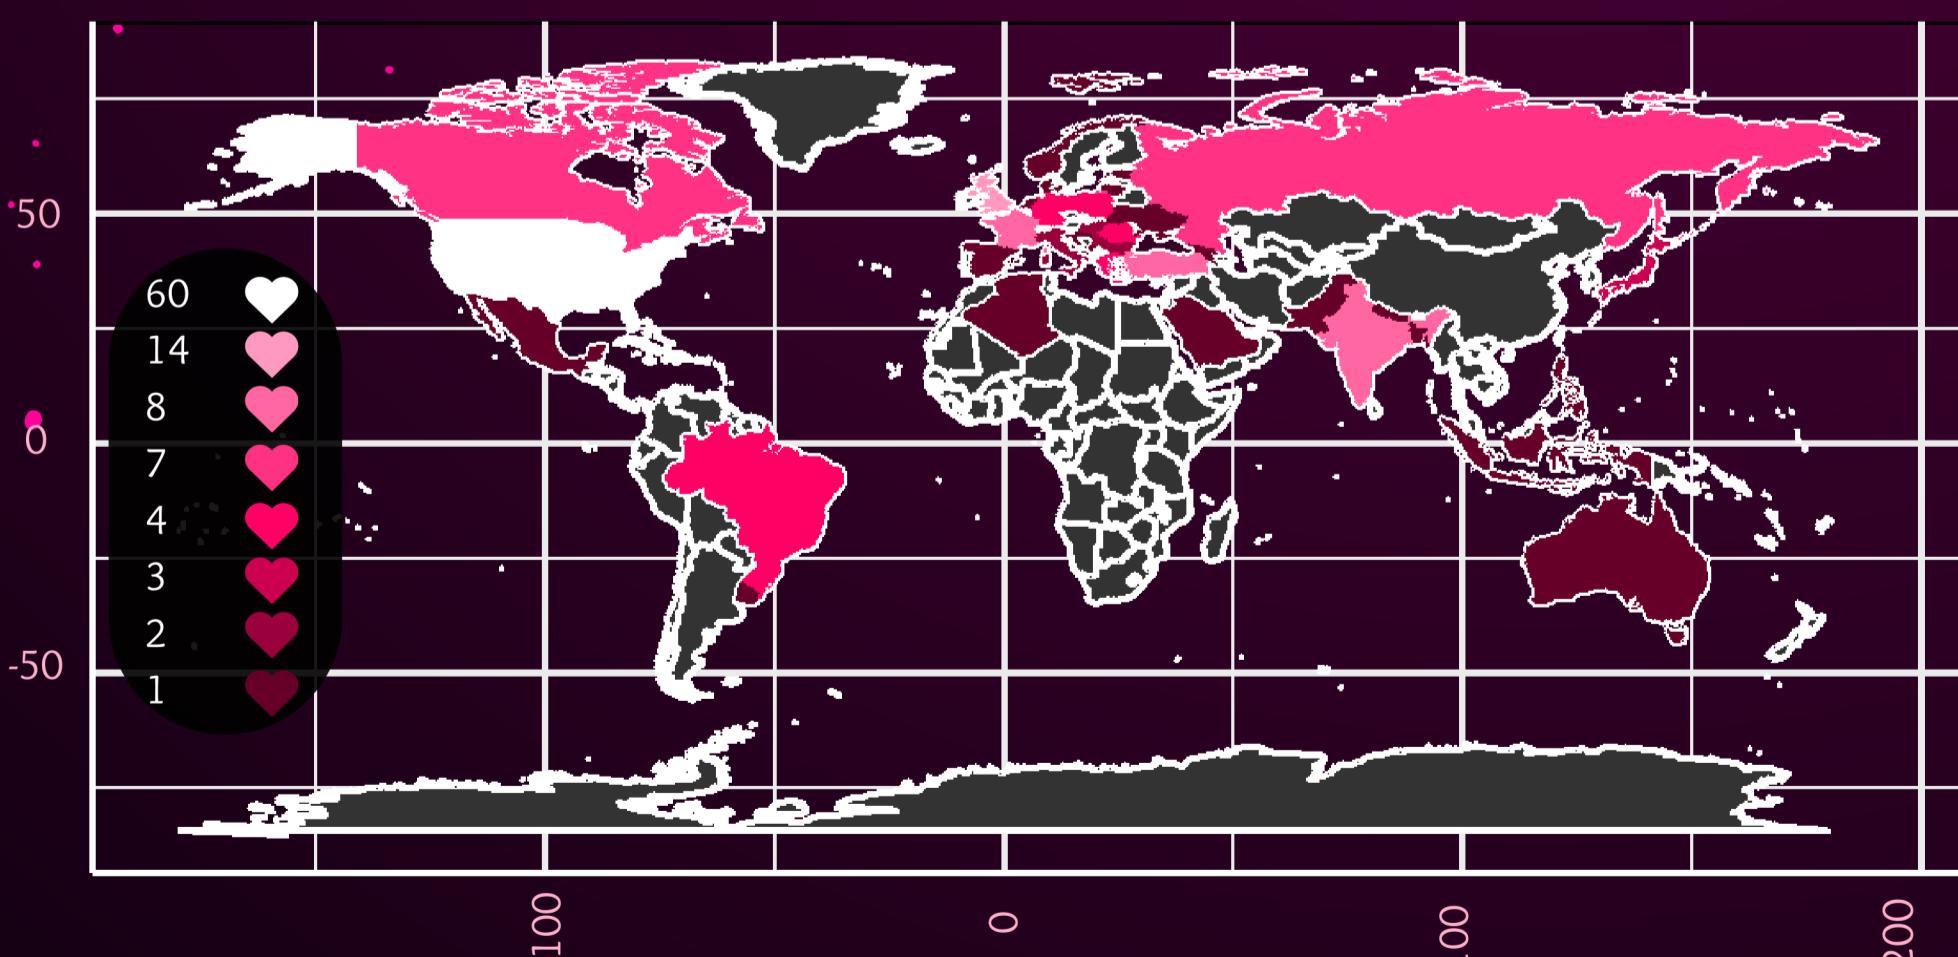

Our goal was to find out everything about good authors. From characteristics that define the most successful writers to countries with the largest number of good authors. Take a look at our findings!

PERCENTAGE OF REVIEWS FOR THE BEST BOOK IN ALL REVIEWS FOR GOOD AUTHOR CANDIDATES

This chart illustrates the percentage of reviews for the best book among all reviews for good authors, each with over 150 books written. Overall, all of the writers had a book that significantly boosted their career, with impacts ranging from 8.8% to 50.5%, and an average of 23.1%. The following conclusion can be made: authors should focus on writing one best-selling book rather than necessarily many good ones.

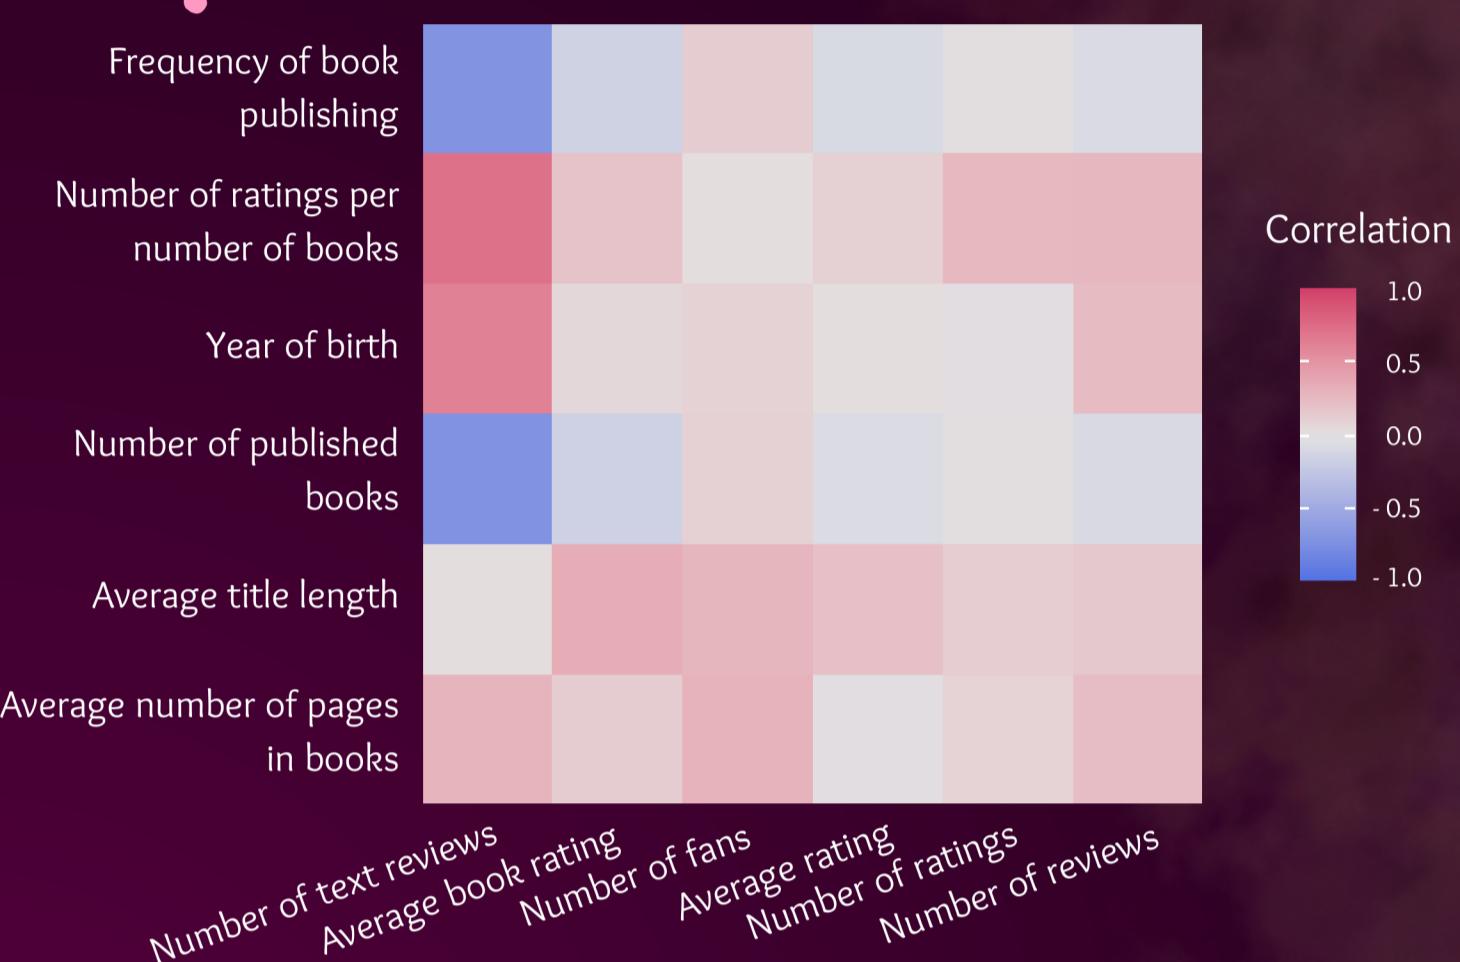

NUMBER OF GOOD AUTHORS IN EVERY COUNTRY

CORRELATION CHART OF TOP 100 AUTHORS

Are you one of the top 100 authors? So you've probably already noticed and know that numbers don't matter! For example, the number of fans is completely unrelated to average ratings and average number of reviews. As you may also notice, the strong correlation of how you write books to their popularity occurs only if you care about the number of text reviews. If you want to have as many of them as possible, keep the average number of reviews high. On the other hand, avoid writing many books and often. This will make your situation worse!

THE MOST POPULAR GENRES:

- **FANTASY**
- **ROMANCE**
- **YOUNG ADULT**

On the map you can see how many good authors are in every country. The brighter the color is, the more good authors are there. The way they were chosen is by picking authors with best average ratings and numbers of fans. Next step was deleting the outliers. As you can see, most of the good authors are from the United States (As many as 60!). However countries in Europe also have their fair share of good authors. Which should be expected as the number of fans was taken into consideration. While analysing the map, you should keep in mind the data that was used. Most of it came from the United States and that is why lack of the good authors in some parts of the world is caused by missing data.
